

DASAR PEMROGRAMAN

Pertemuan XII

Tujuan

- Mahasiswa mampu melakukan pencarian elemen di dalam array dengan algoritma pencarian tertentu.
- Mahasiswa mampu melakukan pencarian nilai dalam suatu array.

Materi

Linear Search

Binary Search

LINEAR SEARCH

Linear Search or Sequential Search sequentially checks each element of the list until a match is found or the whole list has been searched.

SEARCH (L)

```
1  for  $i = 0$  to  $n - 1$   
2      if  $L[i] = x$   
3           $index\_found = i$ 
```

54	17	20	26	31	44	54	55
----	----	----	----	----	----	----	----

$i = 0$

SEARCH (L)

```
1  for  $i = 0$  to  $n - 1$   
2      if  $L[i] = x$   
3           $index\_found = i$ 
```

54	17	20	26	31	44	54	55
----	----	----	----	----	----	----	----

$i = 1$

SEARCH (L)

```
1  for  $i = 0$  to  $n - 1$   
2      if  $L[i] = x$   
3           $index\_found = i$ 
```

$i = 2$

SEARCH (L)

```
1  for  $i = 0$  to  $n - 1$   
2      if  $L[i] = x$   
3           $index\_found = i$ 
```

$i = 3$

SEARCH (L)

```
1  for  $i = 0$  to  $n - 1$   
2      if  $L[i] = x$   
3           $index\_found = i$ 
```

$i = 4$

SEARCH (L)

```
1  for  $i = 0$  to  $n - 1$   
2      if  $L[i] = x$   
3           $index\_found = i$ 
```

$i = 5$

$index_found = 5$

SEARCH (L)

```
1  for  $i = 0$  to  $n - 1$   
2      if  $L[i] = x$   
3           $index\_found = i$ 
```

54	17	20	26	31	44	54	55
----	----	----	----	----	----	----	----

$i = 6$

$index_found = 5$

SEARCH (L)

```
1  for  $i = 0$  to  $n - 1$   
2      if  $L[i] = x$   
3           $index\_found = i$ 
```

BINARY SEARCH

Binary search is an efficient algorithm for finding an item from **a sorted list of items**. It works by repeatedly dividing in half the portion of the list that could contain the item, until you've narrowed down the possible locations to just one.

BINARY SEARCH ()

```
1  i = 0
2  j = n
3  found = false
4  while found = false and i <= j
5      k = (i + j) / 2
6      if L[k] = x
7          found = true
8      Else if L[k] < x
9          j = k - 1
10     else
11         i = k + 1
12 if found = true
13     idx = k
14 else
15     idx = -1
```

6

9	7	6	4	3	2	1
---	---	---	---	---	---	---

i = 0

j = 7

found = **false**

BINARY SEARCH ()

```
1  i = 0
2  j = n
3  found = false
4  while found = false and i <= j
5      k = (i + j) / 2
6      if L[k] = x
7          found = true
8      Else if L[k] < x
9          j = k - 1
10     else
11         i = k + 1
12 if found = true
13     idx = k
14 else
15     idx = -1
```

6

9	7	6	4	3	2	1
---	---	---	---	---	---	---

i = 0

j = 2

found = false

BINARY SEARCH ()

```
1  i = 0
2  j = n
3  found = false
4  while found = false and i <= j
5      k = (i + j) / 2
6      if L[k] = x
7          found = true
8      Else if L[k] < x
9          j = k - 1
10     else
11         i = k + 1
12 if found = true
13     idx = k
14 else
15     idx = -1
```
